Apollo Enterprise Solutions Named a Top Provider of Virtual Collection Technology by Collection Advisor Magazine

Irvine, California – March 09, 2006 – Apollo Enterprise Solutions, the leading provider of intelligent web-based payment and collection systems, has been recognized as one of the top three providers of virtual collection technology solutions by Collection Advisor Magazine.

In an article featuring the company and its technology, the publication identifies Apollo Enterprise Solutions, and the Decisioning Intelligence™ that is the heart of the IDS system, as the “brainchild” of founder and president, Christopher Imrey. With his extensive CTO experience at several large companies, Imrey developed a web-based, debtor-centric payment and collections system that offers debtors a choice of payment or settlement options that best fits their current ability to pay.

“This is significant,” according to Collection Advisor’s editors “since debtors who feel they are managing the process have been found to be much more likely to achieve the settlement terms they agree to meet. Matching offers with the debtor’s ability to pay has other advantages. Costly repossession processes can be avoided, as well as the inevitable loss of a customer that occurs when a debt has to be sold.”

The publication, in its March/April issue, asserts that collection groups “may pursue the promise of new technology to lower collection costs from one source, software to increase debt service capacity without adding staff from another, and methods to motivate and empower the debtor to pay from still another. It is rare; however, to come across a product or service that makes the bold claim to all these promises at the same time—in one service. But this is exactly what Apollo Enterprise Solutions declares for its Intelligent Debt Solutions™ (IDS™) system.”

Collection Advisor’s editors also noted that “Apollo markets the IDS system as a supplement to existing collection efforts. With no up-front costs and no in-house processing required, implementation can be as simple as adding the URL to a letter already being sent by creditors.”

The article concludes, “With its unique application of technology, the Apollo IDS system takes a giant step toward changing the atmosphere between debtor and creditor. With no cost to implement, many collections groups are likely to find IDS an attractive method to boost the bottom line.”
